Current Scenario

Current Scenario

Automation

The adoption of AI technologies in Bangladesh is limited, with only a few solutions introduced, which is significantly behind the global trend.

Efficiency

AI-driven industries are undoubtedly more effective and time-saving compared to other technologies.

Scalability

The current reach of AI technologies is quite limited, and rural populations are hardly benefiting from these advancements.

Problem Identification

Core Problem: Sheba.xyz heavily rely on user input, making service booking inefficient, inconsistent, and reactive rather than proactive.

- High User Dependency & Manual Effort
- Lack of Service Quality Standardization & Vendor Reliability
- Data privacy concern
- Limited AI Automation & Predictive Maintenance
- Weak Personalization & Lack of Behavioral Insights
- Security & Emergency Response Gaps
- Payment & Financial Limitations
- Lack of Smart Home & IoT Integration

1. Urban
2. Sub-Urban
3. Rural

Target Group Analysis

Working Professionals (25-45 years)

Rural Users Without Smartphones (All Ages)

Busy Parents (30-50 years)

Parents managing work + kids' school

Need efficient home services and time-saving solutions

Elderly Users (55+ years)

Retired individuals

Struggle with healthcare access, emergency support, and technology.

Small Business Owners & Entrepreneurs (25-50 years)

small restaurant owners

Need help with daily business operations & personal life balance.

Corporate Clients (Offices, Startups, SMEs, Enterprises)

Parents managing work + kids' school

Need efficient home services and time-saving solutions

Big Idea

Transform Sheba.xyz into an AI-powered, user-friendly ecosystem that automates service booking, emergency response, and financial management—ensuring accessibility for both rural and urban users, with or without smartphones.

Action Plan

Strategic Execution & Technology Acquisition :-

◆ Software & AI Development and logics :-

Users interact with AI-based marketing systems in the following ways:

★ Personalized Recommendations:

AI analyzes user behavior to suggest products, services, or content based on preferences and previous interactions.

★ Chatbots and Virtual Assistants

★ User behaviour tracking

★ Nature language processing (NLP) :- AI analyzes text or voice inputs to understand user queries and preferences.

★ Realtime decision making - AI systems dynamically adjust services.

1. Data Sources :-

User data :- profiles, service history

Service provider info :- availability, ratings

Behavioral data :- clicks, searches

External data :- traffic, weather

Software needed :-

Amazon web services , Google cloud platform

Key Processes:

Data Collection: Stored in databases (SQL/NoSQL)

Data Processing: AI models analyze user behavior and predict service needs

API Integration: Restful APIs handle service queries, payments, and recommendations

Decision-Making: AI suggests personalized services and optimizes pricing

Task Automation: Assigns providers and schedules services

Feedback Loop: Models update based on user interactions

Software needed :-

Postman, Swaggerhub

Core logics :-

★ Matching Algorithm

★ Recommendation System

★ Fraud Detection

★ Dynamic Pricing

Software needed :-

Pros smart price optimization and management (dynamic pricing)

Survvey monkey (feedback)

Apache Airflow (task scheduling)

Apache kafka (Data processing and analysis)

◆ Collaboration & Funding Model

Secure partnerships with service providers (Sheba.xyz, bKash, Nagad, hospitals, security firms).

Revenue-sharing agreements → Earn commission per AI-booked service.

Phase-wise investment → Purchase software as revenue scales.

Service Tiers & Subscription Model

Open for the types of users in Bangladesh, where we offer 3 types of services like :-

1. Free version (with add)
2. Basic version (without add) - purchase rate about 200/- BDT
but free for the students.
3. Premium version (without add)
purchase rate - 500/- BDT
For students - 300/- BDT

- Inclusive Pricing for Every User Segment

- For Rural Users Without Smartphones:

- ☎ Dial *364# for emergency & essential services (free for all).

Press 1 → Call Firefighters

Press 2 → Call Police (Crime & Safety Hotline)

Press 0 → Call Ambulance or connect to doctors

Ensuring 24/7 AI Assistance & Service Execution

- Auto-Generated AI Responses for instant service bookings & customer queries.

- AI-driven emergency handling → Detects crises & auto-alerts authorities.

- Human-AI Hybrid Support → AI escalates complex cases to human agents.

Data Privacy & Cybersecurity Measures

- End-to-End Encryption → AES-256 + TLS 1.3 for all user data.
- Role-Based Access Control (RBAC) → Only authorized personnel access sensitive info.
- Federated Learning & Differential Privacy → AI learns without centralizing user data.
- Secure APIs & Anti-Fraud AI → Prevents algorithm manipulation by vendors.

Long-Term Scalability & Expansion Plan

- Phase 1: Urban Expansion → Target Dhaka, Chattogram, Sylhet.

- Phase 2: Corporate Integration → Offer AI workforce automation for businesses.

- Phase 3: Nationwide AI Access → Expand rural dial-in services for wider reach.

MARKETING STRATEGY

USP

- Bangladesh's First AI-Driven Service Concierge
- Emergency Services for Rural Users (FREE)
- Student Discounts
- Financial Savings & Convenience
- Smart Security & Emergency Response

Targeted Marketing Approach

- ☎ National USSD Awareness Drive – Promoting *364# emergency services via TV, radio, and rural mobile SMS blasts.

- ◆ Student Engagement

- Campus Ambassador Program – Recruit students to promote free AI concierge access in their universities.

- ▶ Influencer Partnerships – Work with popular YouTubers & TikTok influencers to show how Sheba Neo simplifies student life.

- Targeted Digital Ads – Facebook, LinkedIn & YouTube ads showcasing AI-powered home & financial management.

- Discount Collaborations – Partner with e-commerce & food delivery platforms for exclusive Sheba Neo discounts.

Financial

Total investment required :- 100,000 USD

Pre money valuation :- 80,000 USD (year 01)

Post money valuation :- 200,000 USD (year 05)

- ROI :- 20%
- CAR :- 8-10%
- Net profit :- 13.33%
- Break even point :- 5 year
