PROBLEM IDENTIFICATION

Core Issue

Operational Inefficiencies

INEFFECTIVE MANAGEMENT AND STRATEGY

- **Lack of Competitive Strategy:** Inability to distinguish itself from competitors like Grameenphone, Robi Axiata, and Banglalink.
- **Delayed Technological Upgrades:** Slow adoption of new technologies, leading to lag in service quality and offerings.

Customer Retention Issues

- **Declining Customer Base:** Only 700,000 active users out of 190 million SIM users in Bangladesh.
- **Inferior Service Quality:** Issues with call drops, slow internet speeds, and inadequate customer support.

Poor Market Penetration and Coverage

- **Limited Network Coverage:** Reached only 78% of the population by 2022-23, limiting potential customer base.
- **Underdeveloped Rural Outreach:** Insufficient presence in rural and underserved areas.

Inadequate Marketing and Brand Positioning

- **Insufficient Brand Differentiation:** Failure to effectively market unique value propositions.
- **Weak Marketing Efforts:** Inability to attract and retain customers through compelling marketing strategies.

Financial Mismanagement

- **Increased Financial Losses:** Poor resource management leading to significant financial strain.
- **Inefficient Investment:** Inability to allocate funds effectively for infrastructure and technology upgrades.

Technological Lag and Service Quality

- **Service Quality Issues:** Poor performance across various service metrics, leading to customer dissatisfaction.
- **Delayed Rollout of New Services:** Inefficiency in capitalizing on early advantages like 3G and 5G rollouts.

OPPORTUNITIES IDENTIFICATION

Fiber Optic Coverage

Leverage over 45,000 kilometers of fiber optic cables laid across Bangladesh to enhance broadband connectivity and support digital transformation

(Source: BTRC Annual Report 2020-2021).

International Submarine Cable Connectivity

Utilize connections to international submarine cable systems like SEA-ME-WE to provide crucial international bandwidth for internet and data services

(Source: Submarine Cable Networks).

RAILWAY LINE

Rail-line Optical Fiber

Capitalize on the government's proposal to lease 3,000 kilometers of optical fiber along railway lines for improved network infrastructure

(Source: The Daily Star, 31 August 2022).

Government Initiatives

Participate in projects like the National Fiber Optic Backbone Network (NFB) to expand optical fiber infrastructure and improve broadband access

(Source: Bangladesh Government Projects).

Competitor Insights

Grameenphone (GP): Follow GP's example of investing in fiber optics for backhaul connectivity to support mobile networks

(Source: Grameenphone Annual Report).

Robi Axiata Limited: Invest in fiber optic networks to enhance network reliability and data speeds

(Source: Robi Axiata Annual Report)

Banglalink: Deploy fiber optics for backbone connectivity and robust internet services

(Source: Banglalink Website).

OPPORTUNITIES IDENTIFICATIONS

Bangladesh Telecom Market

Market Size in USD Billion

CAGR 4.31%

Source : Mordor Intelligence

Study Period 2019-2029

Base Year For Estimation 2023

Market Size (2024) USD 4.87 Billion

Market Size (2029) USD 5.86 Billion

CAGR (2024 - 2029) 4.31 %

Market Concentration High

Major Players

BIG IDEA

Transform TeleBarta into Bangladesh's Leading Fiber-Optic Telecom Provider

Vision: Transform TeleBarta from a tower-based telecom to the top **fiber-optic telecommunications** provider in Bangladesh within two years.

This transformation will deliver superior internet speed and reliability, position TeleBarta as the foremost provider of high-speed broadband services in Bangladesh, leveraging the latest technology to meet growing consumer demands and drive digital inclusion across the nation.

ACTION PLAN

Phase 1: Infrastructure and Partnerships

- **Leverage Fiber Networks:** Integrate 45,000 km of existing fiber and 3,000 km along railways.

Teams: Network Engineering, Operations

- **Rapid Fiber Deployment:** Expand fiber-optic coverage in urban and rural areas.

Teams: Network Engineering, Field Operations

- **Government Collaboration:** Partner with National Fiber Optic Backbone Network (NFN).

Teams: Business Development, Legal

Phase 2: Service Rollout and Marketing

- **Bundled Packages:** Launch combined internet, digital TV, and mobile services.

Teams: Product Development, Marketing

- **Advanced Applications:** Introduce services like TeleBarta Mobile TV and telemedicine.

Teams: Product Development, IT

- **Rebranding Campaign:** Promote the new fiber-optic network.

Teams: Marketing, PR

ACTION PLAN

Phase 3: : Customer Experience and Operational Excellence

- **Enhanced Support:** Implement AI-driven support and 24/7 helplines.

Teams: Customer Service, IT

- **Digital Platforms:** Upgrade the MyTele Barta App for better engagement.

Teams: IT, Product Development

- **Financial Management:** Optimize resource allocation and reduce costs.

Teams: Finance, Operations

Expected Outcomes

- **Market Leadership:** Become the top telecom provider with the largest fiber-optic network.
- **Customer Satisfaction:** Achieve high customer satisfaction and retention
- **Sustainable Growth:** Ensure financial growth and operational efficiency.

PROPOSED ROADMAP

“

MARKETING

Web-Based Marketing Strategy

Objectives

- Increase brand awareness.
- Drive customer engagement and acquisition.
- Enhance customer retention through digital platforms.

Key Tactics

- Content Marketing: Create engaging content on fiber-optic technology benefits, customer testimonials, and success stories.
- SEO Optimization: Enhance website content for better search engine visibility.
- Social Media Engagement: Use Facebook, Twitter, and Instagram for promotional campaigns, customer interaction, and feedback.
- Influencer Partnerships: Collaborate with tech influencers and bloggers.
- Email Marketing: Targeted campaigns to inform customers about new services, promotions, and updates.

Examples

- Live Event Streaming: Stream popular events (e.g., BPL, IPL, ICC World Cup) for free.
- Interactive Webinars: Host webinars on digital transformation, smart home technology, etc.

E-Commerce Expansion

Objectives

- Simplify service subscription and management.
- Increase sales of telecom products and services.
- Enhance customer experience through a seamless online platform.

Key Tactics

Online Storefront: Develop an intuitive e-commerce platform for purchasing SIM cards, recharging accounts, and subscribing to services.

Mobile App Integration: Enhance the MyTele Barta App with e-commerce functionalities.

Examples

Bundled Offers: Sell bundles of high-speed internet, digital TV, and mobile services online.

Customer Loyalty Program: Implement a rewards program for online transactions.

Feasibility Analysis

Impact

Ultra-Fast Speeds:
Superior internet
performance.
Market Leader: Dominant
position in India.
Digital Inclusion:
Enhanced internet access.

Reliance Jio

Budget Feasibility

Initial Investment: 50 crore
BDT
Strategic Success:
Following Jio's proven
model.

Market Potential

Opportunity: High
demand for reliable
internet.
Competitive Edge:
Superior fiber-optic
services can surpass GP,
Robi, and Banglalink.

TeleBarta

Impact

Market Leader: Strong
presence in Bangladesh.
Customer Base: Large,
diverse user base.
Digital Inclusion: Bridging
the digital divide.

Grameenphone

Mobile & Internet Subscriber (Mn)

Contingency Plan

It is much possible for Telebarta to use Banglalink's network towers through a process known as “Infrastructure Sharing”

Negotiation and Agreement

Initial Contact: Telebarta should initiate discussions with Banglalink to explore the possibility of sharing their network towers.

Agreement Terms: Both parties need to negotiate the terms of the agreement, including rental fees, duration, maintenance responsibilities, and other conditions.

Technical Feasibility

Site Assessment: Conduct a technical assessment of Banglalink's towers to ensure they can support Telebarta's equipment.

Infrastructure Deployment

Equipment Installation: Install Telebarta's antennas, transmitters, and other equipment on Banglalink's towers.

Power Supply: Ensure adequate power supply and backup solutions for the additional equipment.

Operational Coordination

Maintenance: Agree on maintenance schedules and responsibilities to ensure the smooth operation of the shared infrastructure.

Financial Arrangements

Rental Payments: Telebarta would pay Banglalink an agreed-upon rental fee for using the towers.

Cost Sharing: Both parties can share the costs of power supply, maintenance, and security based on usage or other agreed metrics.

Legal and Contractual Safeguards

Contract: Draft and sign a detailed contract outlining all terms, conditions, and responsibilities.

THANK YOU
